

EventHub - Phase 1, Step 9: Sketches

First draft by Claude, for Madhavan Suresh to change | 28 September 2026

How to use this document

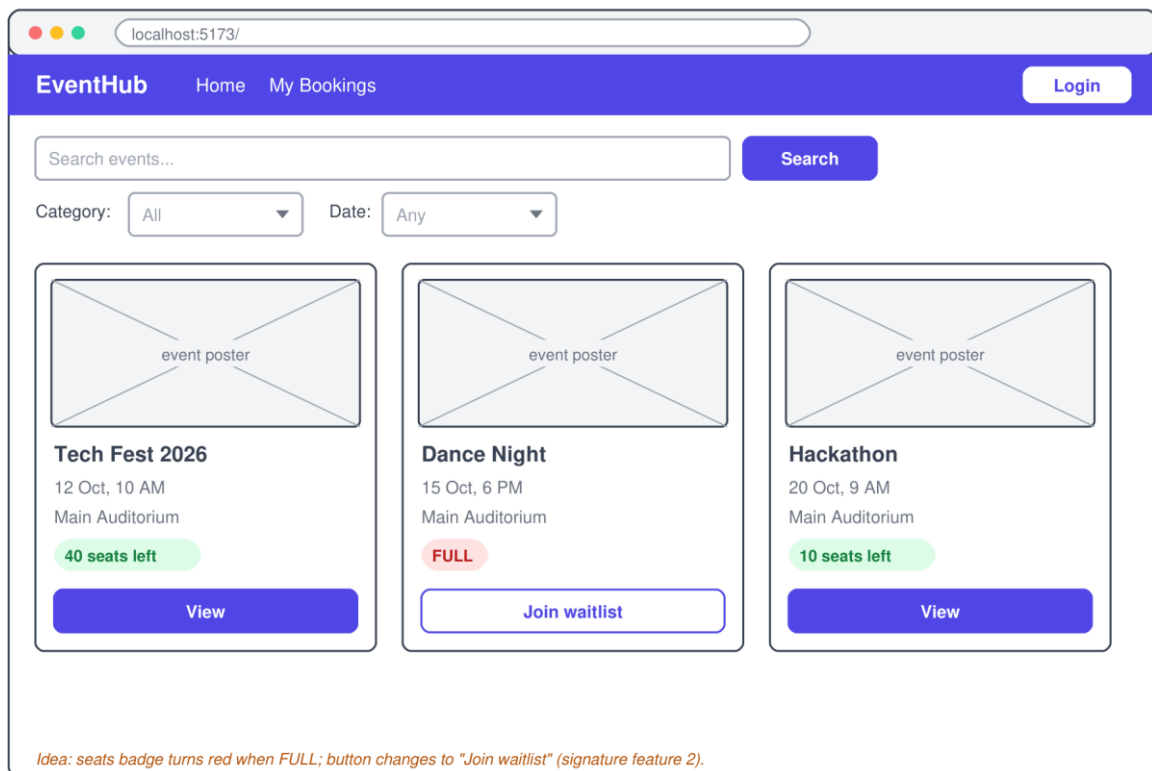

These are **wireframes**: simple drawings that show **what goes where** on each page. Colours and pictures come later. This is a **first draft** for you to change.

- Print it, or open it in Word.
- Look at each sketch and ask: What is missing? What would I move? What would a student want here?
- Write your ideas in the "My changes" lines under each sketch (or draw on the printout).
- Send a photo or tell Claude your changes. The sketches will be updated to your final version.

Signature features shown in the sketches: (1) seat hold, never oversell; (2) smart waitlist; (3) QR tickets; (4) certificates for attendees only.

Page 1 - Home (list of events)

1. Home page - list of events

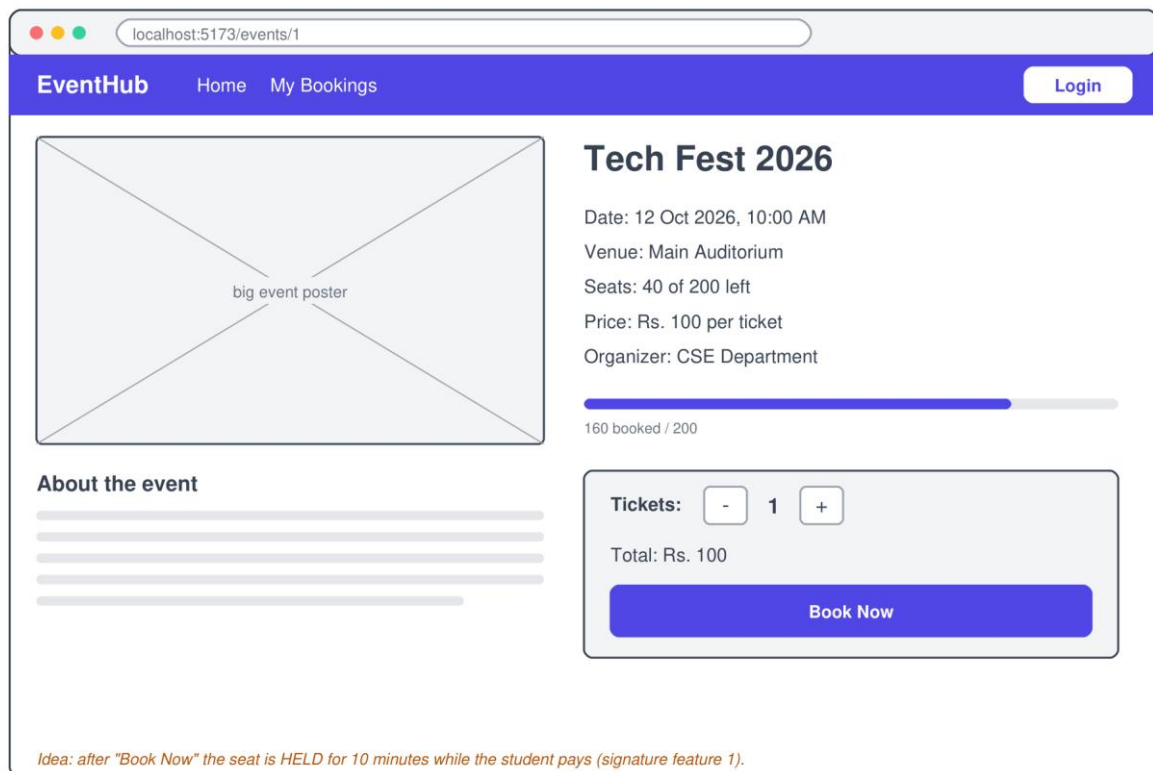

What it shows:

- Search bar + Category and Date filters
- Event cards: poster, name, date, venue, seats badge
- FULL events show a red badge and a "Join waitlist" button

My changes:

Page 2 - Event details

2. Event details page

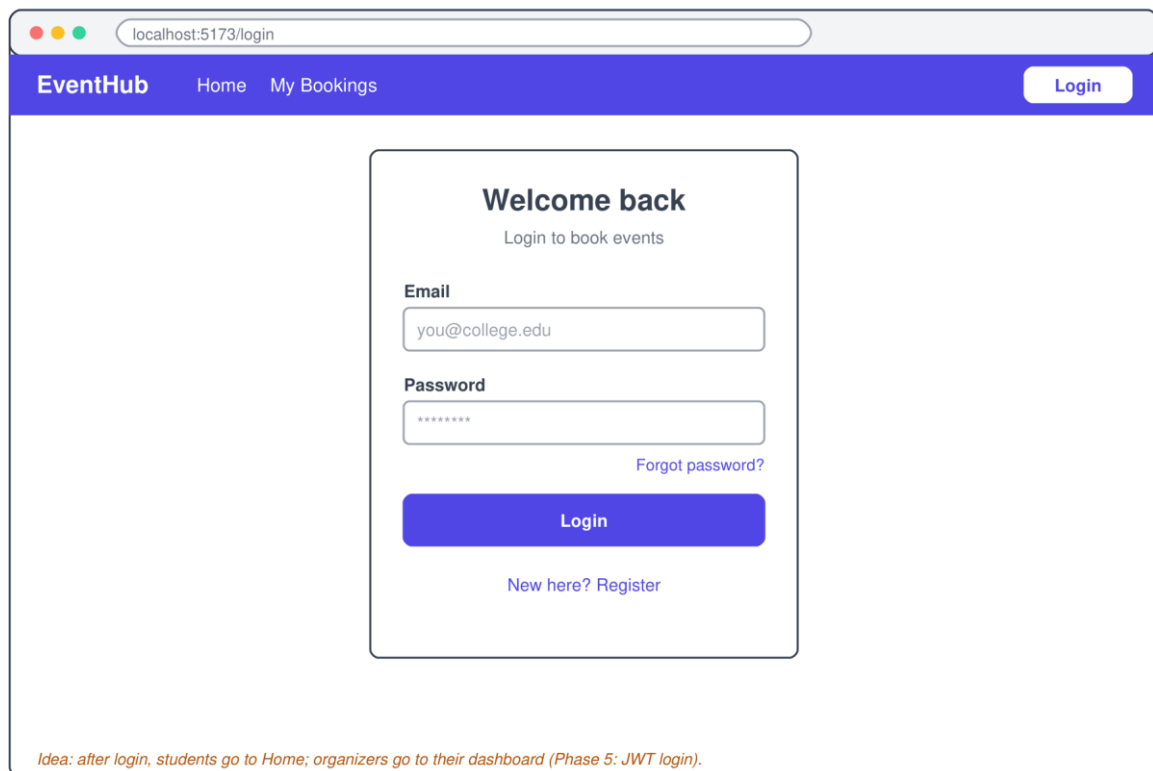

What it shows:

- Big poster + all details (date, venue, seats, price, organizer)
- Progress bar: how many seats are booked
- Ticket counter (- 1 +), total price and the Book Now button

My changes:

Page 3 - Login

3. Login page

localhost:5173/login

EventHub Home My Bookings Login

Welcome back
Login to book events

Email
you@college.edu

Password

[Forgot password?](#)

Login

[New here? Register](#)

Idea: after login, students go to Home; organizers go to their dashboard (Phase 5: JWT login).

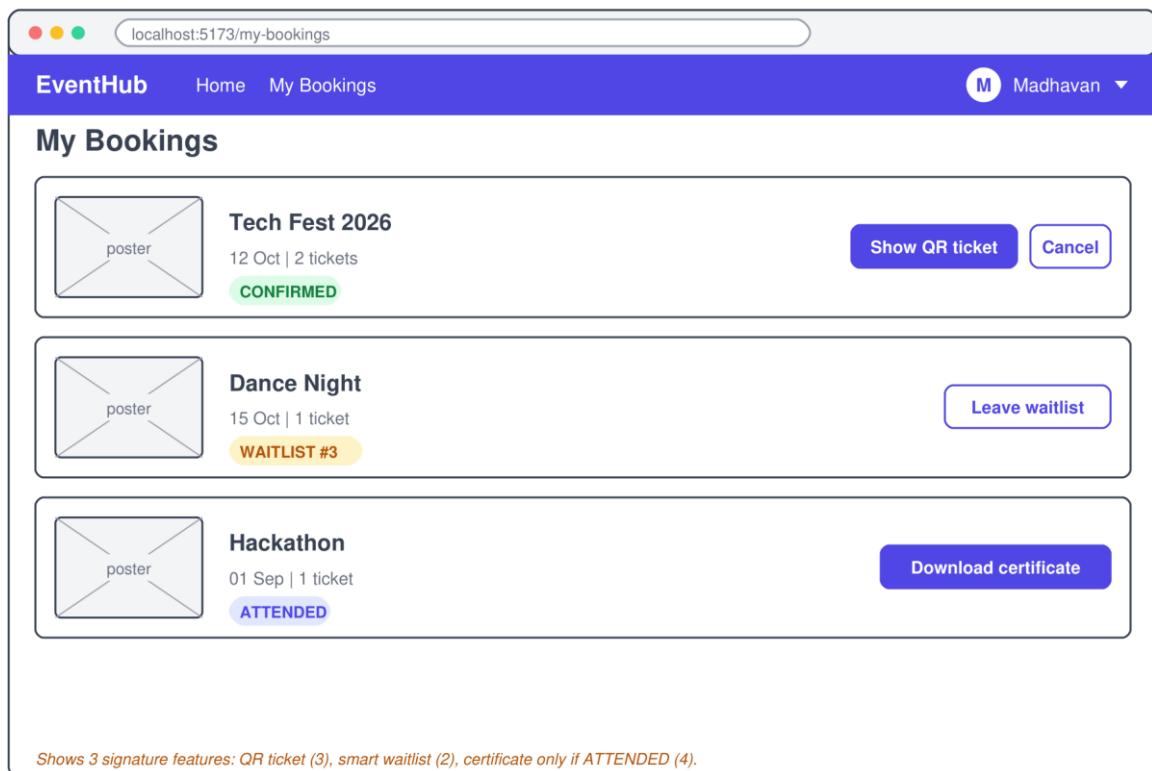

What it shows:

- Email + password
- Forgot password link and Register link
- Students go to Home, organizers go to their dashboard

My changes:

Page 4 - My Bookings

4. My Bookings page

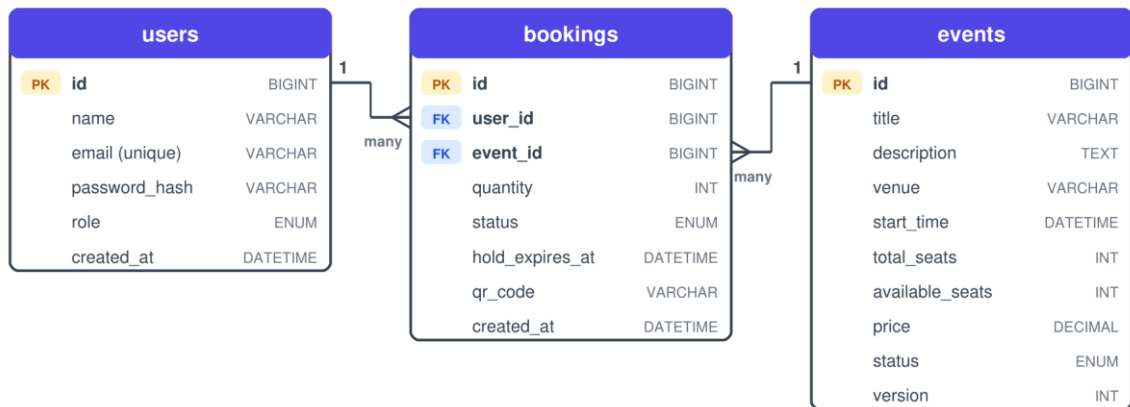

What it shows:

- Each booking shows a status badge: CONFIRMED / WAITLIST / ATTENDED
- CONFIRMED: Show QR ticket, Cancel
- ATTENDED: Download certificate

My changes:

Database diagram (ER diagram)

5. Database diagram (ER diagram) - Phase 1 draft

How to read it

PK = primary key: unique number for each row (like a roll number)

FK = foreign key: points to a row in another table

1 ----> many : one user has many bookings; one event has many bookings

role: STUDENT / ORGANIZER / ADMIN

bookings.status: HELD / CONFIRMED / CANCELLED / WAITLIST / ATTENDED

hold_expires_at: seat hold ends after 10 minutes (feature 1)

events.version: stops two people buying the last seat (feature 1)

Later phases add: waitlist order, approvals, certificates, categories.

What it shows:

- 3 tables: users, events, bookings
- bookings links a user to an event (1 user - many bookings, 1 event - many bookings)
- hold_expires_at and version protect the seat booking (feature 1)

My changes:
