

Phase 0 - Foundations

Time	Start date	Finish date	Status
2-3 weeks			Not started

Goal: Learn the basics and build the EventHub rules as a simple Java console program.

Real-life example: Like learning to ride a bicycle in an empty ground before going on the road. The console app has the same rules as the real app, without the difficult parts.

Step checklist

#	Step	Done
1	Study the Learning Notes: Java basics, OOP, collections, exceptions	☐
2	Create classes: Event, Student, Booking, and enum BookingStatus	☐
3	Add menu options: 1. List events 2. Book 3. Cancel 4. Show waitlist	☐
4	Throw a custom SoldOutException when seats are full	☐
5	Use a Queue for the waitlist - cancelling gives the seat to the next student	☐
6	JavaScript practice: a small HTML page that lists events from a JSON array with a search box	☐
7	SQL practice: SELECT, WHERE, JOIN, GROUP BY on sample tables	☐
8	Learn Git and push the console app to GitHub	☐

Output of this phase

- EventHub console app (Java)
- Mini event list web page (HTML + JS)
- Your first GitHub repository

Done when (check before moving on)

Check	Passed
Booking, sold out, cancel and waitlist all work in the console	☐
You can explain class vs object and List vs Queue	☐

Skills you practise

OOP, collections, exceptions, enums, JavaScript arrays, SQL, Git

Where your work goes

Phase_0_Foundations\practice\ (console app, JS page, SQL notes)
